DETAILED ACTION

Allowable Subject Matter

1. Claims 24-28, 41-46 allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

Prior art failed to establish thin film channel with doped and undoped portions to aid in the manipulation of the fixed electrical charge.
3. Claim 37 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
4. The following is a statement of reasons for the indication of allowable subject matter:

Prior art failed to establish zinc oxide thin film channel region with doped portion to aid in the manipulation of the fixed electrical charge.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
6. Claims 1-23, 34-36, 38 and 39 rejected under 35 U.S.C. 103(a) as being unpatentable over Chiang et al. (4,598,305) in view of Kamiya et al. (4,622,656)

Regarding Claims 1-23, 34-36, 38-39, Chiang et al. disclose a depletion mode thin film semiconductor photodetectors where in Figs. 1 and 7, it is disclosed a depletion mode thin film transistor 10 with source electrode 30, drain electrode 32, gate electrode

Art Unit: 2826

22, two layers of channel region 16 and 14 that have n doped upper layer and p doped lower layer and gate oxide dielectric layer that separates gate electrode 22 from the channel regions 16 and 14. Chiang et al. fail to disclose the required doping of the portion of the channel region to get charge density distribution. However, Kamiya et al. disclose a non-volatile semiconductor memory where in Figs. 3-5 and claims 21 and 22, the required doping/implantation in a portion of the channel region to get charge density distribution is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the get the required charge density distribution by doping portion of the channel region in Chiang et al. as taught by Cho et al. in order to have a semiconductor device with increased performance.
